

Client: BAA

Project: Land Referencing - T5

Background

Supporta has worked with BAA for a number of years, most recently on Heathrow's new Terminal 5 ("T5"), a project designed to manage the airport's additional 30 million passengers.

Our Solution

Land referencing work was required to support 35 planning applications and Compulsory Purchase Orders under at least six different statutory procedures. We also supported applications to tie in with the Department of Transport's work, for widening works to the M25 motorway.

To achieve this, we established an information system, capable of dealing with the hugely diverse range of procedural requirements which the differing statutory regulations imposed.

Key Benefits

Supporta's team were able to bring their broad range of experience to bear on designing and populating databases which could provide the plans, maps, schedules, notices, etc, in the form and with the content that each application required. With such a hugely complex matrix of information, interests and potential pitfalls our client was delighted that not a single successful challenge has been raised on legal, technical or procedural grounds.

It is a widely held view that Supporta was the only organisation capable of reliably delivering such a comprehensive result.

Our Expertise

Supporta's Land Development business is the most respected provider of land referencing and associated consultancy services in the UK. Our dedicated team is the largest and, when it

comes to this specialist technical minefield, most competent group of individuals available.

We have forged long running relationships with developers undertaking national projects; like the Channel Tunnel Rail Link, regional schemes like Crossrail and local regeneration schemes such as Doncaster Waterdale and Waterfront.

We have developed a portfolio of expertise that spans the land development process.

Supporta Professional Services, Expertise in land acquisition & management systems.
